This source selection guide is provided to help you determine which evaporation source type might fit your needs the best.

How to use the Guide:

- 1) Determine how much current your system power supply is capable of safely producing.
- 2) Establish the vapor temperature of the material(s) you plan on evaporating.
- 3) Estimate the coating thickness you will be attempting.

With the information shown above, you can select which source types will best meet your needs. The actual power required for each part number can be found on our website by clicking on the part number. As always, the R. D. Mathis company offers no charge technical support if you need further assistance in choosing the right evaporation source to make your thin film coating process a success.

© Duplication, reproduction or copying of the information contained in this selection guide is not permitted without the express written consent of the R. D. Mathis Company.

We are specialists in the custom fabrication of Hi-Vacuum evaporation sources with complete and highly flexible refractory facility. Our comprehensive catalog is available upon request.
